He come to court me once mother When we lived over south, And tried to kiss me-the dunce-mother, And poked his chin in my mouth;

The old sespegrace !-But he said 'twas a loving blow, Over the left , you know, mother, Over the left, you know.

He was ugly and old-but rich, mother, The last an important thing-So I left the stupid wretch, mother, Come, when a present he'd bring. He said, "My dove, Will-you be my love 1" I told him, " Oh, yes, just so," Over the left, you know, mother, Over the left, you know.

And Harry got quitwjealous, mother, Although no reason had he ; And sighed like a broken bellows, mother, But I told him " Riddle-du-ree! " It's all a sham. The old thing to bam ; For all the love I show Is over the left, you know, mother, Over the left, you know.

And'ere I was wesided to Harry, mother, I still my humor would please; And though I consented to marry, mother I yet could not help but tease. Unhould love everyore Old Spriggs, I amore—

It made Harry as mad as a hoe, But 'twas over the left, you know, mother, Gree the left, you know.

When I stood up at the altar, mother, To wed the man of my choice, Pretended to tremble and talter, mother, And spoke with insudible voice, To " love and obey " Dear Harry, that day, To pledge I was no ways slow; But 'twas over the left, you know, mother, Over the left, you know.

Scientific.

WOODWORTH'S PLAINING MACHINE.

The Scientific American, has the fol lowing as to the above machine. It may be difficult precisely to understand where interests now are; the combination of two such managers and capitalists as Wilson and Beardslee, will make it difficult for parties to protect their interests. We have heard that Beardslee and Wilson, who were in opposition, combined, that B. took the interests of Wilron and is now receiving the rents and the profits of Wilson, peared as follows: First the o'lodior as assignee of Woodworth's and at the same time selling his own. There are many assignees of the Woodworth mannerly enlarged. Try it.

Another useful purpose of this article is going on.

"The agents of Mesers. Woodworth's allowed to draw the milk. and Goodyear's patents are preparing to

statement made in No. 10, in respect to after milking. Of course the udder should erful stimulus, upon all those who, from self will frequently core slight cases. principle, are opposed, to these extensions. Our position is well understood by the readers of the " Scientific American," but we notice with regret that some of our most able and trusty co-operators last year, The sucking and butting it administers is are now either dumb or are avowedly friends to the Woodward Extension scheme. There is danger,-let all those who feel upon this subject, be active in their efforts to bring public opinion to bear upon Members of Congress.

We have not a farthing's interest in the matter, it cannot effect us for good or evil, but a host of inventors, manufacturers, and mechanics, are liable to sustain immense injury thereby, therefore they should or ganize in one determined effort to thwart the movements of these schemers, and speculators. In volume seven we devoted column after column to the discussion of this subject, and have presented every argument which we deemed important, to

effect the object in view.

Our readers who are specially interested cannot expect us to devote much more space to its consideration, therefore we shall, in future, briefly allude to the efforts of the schemers, without entering upon lengthy discussions of the merits of the case, which are bad enough to insure its

We are irrevocably opposed to the extension of either of the patents in ques are needed, to exert what personal influence we possess. Some netive and trusty person should be employed to watch the snovements going on in Washington and separt progress; our daily paper reporters do not feel interested in the matter, and ate therefore not expected to keep the die advised. We recommend our Woodworth patent in its tree condi-

Lucois Paige, of Cavendish, Va., has invented an improved tea kettle, which is constructed by placing in the bottom of an ordinary tea kettle, several elbow shap-ed flues open at the bottom and at the eddes just below the flauge. By this Lanon Venpro-arrangement a larger amount of heating neit, Editor and p auriace is obtained, and the water is made York Herald, he surface is obtained, and the water is made a total in much less time. A very good Ten Thousand Dollars for libelling Educations. The inventor has applied ward P. Fry. He has to

Farmers' Column.

CURING HAMS.

[In the last Patent Offic Report, Mr Jas, Campbell, of Weston, New Jersey, gives the following as a superior process for caring homs :]

The best method I have found for curing hams is, after the hams have been cut, let them lie out on a shelf, where they can have plenty of cool air, so that the anima heat is entirely out of them before you attempt to put them down in salt; then corn them down for two or three days; after which drain off any bloody water which may come out, and then make the following pickle, sufficient to cover them! Take nine pounds of salt, three ounces of saltpetre, one ounce of salaratus, four pounds of brown sugar or molasses, and six gallons of water. Let them lie in the above pickle from three to six weeks, according to the size of the hams, when you may take them out and smoke them with good hickory or apple wood until sufficient to suit your taste. They should be taken down and hung up in a dry place to pro-

tect them from the flies.

I have hams cured after the above method, which wure almost as fine when eighteen months old as when taken from the smokehouse. And while upon the subject of hams, I would further say that, when you boil them, they should be boiled until done, in good soft water; and when nearly done, throw in a handful of clean imothy hay; it absorbs all impurities that may be around the outside of the ham. As soon as done, take out the hay but leave the ham in the water until near ly cold, when you may take it out.

TO PREVENT COWS FROM SHEDDING MILK.

Collection (liquid enticle) is a somewhat recent discovery, and has been applied to useful purposes by surgeons, but I am not ware that it has been used to prevent the loss of milk by leakage from the udder of the cow. The mode of applying it is as follows:

After milking take a thin piece of mus ng about the size of a three cent piece, wet it in the collodion and apply it quick y to the end of the teat. It drys imme diately, and adhering firmly, prevents the escape of milk from the orifice. It can

readily be removed at the next milking. On first making use of this means, I did not anticipate anything more than temporarily to prevent the evi'. After make ing a few applications it was discontinued. it had permanently lessened the fault. Upon reflection, the modus operandi apcontracts the orifice, and then prevents the escape of milk; and second the bag brcoming distended, its capacity is perma-

may be of much moment to know what become tender from chaps and deep first in sections of six hundred and forty-seven sures in them. They may readily le acres each; and the alternate sections to Woodworth and Goodyear Parent Extension.—In the telegraphic reports of New York daily papers of the 21st, we feel the following statement: it will not be loosened, even

Mr. Editor :- The above recipe I cut of opponents very active against it in the Stock Register, and add, that This fully confirms the truth of our the chapped teats of a cow-to be applied

My observation and experience, though limited, go to prove the better plan to be letting the calf have free access to the dam for twenty-four hours after birth .just the right treatment for the swollen udder; and cases of "Garget" are exiremely rare where it is plan is practiced. It is also much easier to separate the moth er from the calf the next day, the maternal nstinct being then partially quieted.

Also, it should never be permitted to kill a calf in any place which the cow can have access to. Their piteous lowings in such cases leave no room to doubt that they recognize the blood of their offspring. The writer has known of actual teurs pouring down the face of a cow, on being shown the bloody hide of her calf. These may be thought matters too trifling for the consideration of " men of mark "-but it is not so; the beautiful humanities must all combine, to form the perfect character -S -Rural New York.

La Lamartine says: "The Turks, as race of men, and as a nation, are still the first and most elevated amongst the people of the East. Their character is noble and grand; their courage is intact; their virtues relatious, civil and domestic, are calculated to inspire in every impartial mind esteem and admiration. Their nobility is written on their brow, and in their actions. If they had better faws and more enlightened government, they would be one of the first people in the world."

FLAT JACKS .- Scald a quart of Indian Ireland .- Boston Transcript. meal with sufficient water to make a thin batter. When it is lukewarm, stir in half enders to read carefully the Report of the spint of wheat flour, and a gill of yeast, and a teaspoonful of salt; let it stand to truthful and powerful, showing up the and a teaspoonful of salt; let it stand over night. If sour is the morning, add a or two miles of India rabber under their little saleratus, dissolved in warm water. Allow two table-spoonfuls of the batter to present destruction of rails and machinery, a cake, and fry them in butter or nice and do away with the noise attendant ugard enough to prevent them from sticking on the motion of the trains. LARGE VERDICY .- James Gordon Ben

Railrand Alatters.

The Broad Guage Road to the E The Dayton Gazette contains an

count of a recent conference in that e of the Dayton stockholders with Presid Kent and Treasurer Earl of the Bro Guage Company.

Interesting statements were made of a contemplated route, showing the distant by actual survey to New York to be 1 miles shorter than any other road front the south-west. There were two rou through Pennsylvania from the State li The Venango road is under contract to intersection with the Sunbury and I road, which is under contract to Philad phia, and both will be finished as soon the Ohio part can be. 'The city of Ph delphia has subscribed two millions to capital of the Sunbury and Eric road. This line connects with one direct acre New Jersey to New York city.

The other route runs from Franklin intersect the New York and Erie roa and there are ample means for its comple-

On the Ohio part of the line there are bona fide subscriptions to the smount of ten thousand dollars per mile, for the 210 miles from Dayton to the State line, and the whole line has been let to Mr. Doolittle. The object is to construct a road from "the great Southwest of uniform guage, easy grades and ample curves," direet to New York-of grades fifty per cent, better than either the Baltimore and Ohio, or the Pennsylvania Central-a road of the greatest capacity and on the shortest route to the Emporium of commerce.
When this is done, the question will not he "can the road procure business?" but can the road do all the business that will be offered?" Liberal donations of right of way and depot grounds, and large additional subscriptions to stock are being made.

Mesers. Winters and Beckel on the part of the Company, and Mesers. Grimes, Parrott, Steele, Garst, Thresher and Sway nie, on the part of the citizens, were appointed a Committee to open a correspondence with the interests Southwest on the subject of their connecting at .Dayton, with their line by a road of the sum guage. The Report of the President with a map, will be published in a few days.

The Mississippi and Pacific Railroad

A railway bill, of which a copy is now before us, has recently passed the legislature of Texas, by a strong majority in both Houses, which is intended to secure to Texas the advantages of the great Pa cific and Atlantic road. The bill, which is attributed to Senator Rusk, is liberal in ils provisions.

It directs the Government of the Stat to advertise for proposals, to be made up from a point on the eastern boundary of Texas, not north of Fulton in Arkansas, to the Rio Grande near El Paso; the road to cross the Trinity, Brazos and Colerade rivers, as near the 32d degree of north and I was somewhat surprised to find that | latitude as practicable, and to be built and equipped in the most approved manner. Fifty miles are to be finished and in operation within eighteen months after en tering the contract, and one hundred mile more every year until completed. The bill grants to the company obtaining the contract twelve thousand eight hundred acres for every mile constructed and put

in the next six years. The act also provides for the union of extend their business, by special act of from a Harrisburgh paper. As a gives no which may form the different links of the this company with the other companies Congress. There are, however, a num-\$300,000 guaranty on the part of the con tractors that the terms of the act shall be complied with: and in case of failure at any time on their part, to fulfil the conthese patents, and it should act as a powspecified, forfeits the guaranty and the work already done to the State.

It is said that a company of responsible northern men are about to organize, and commence proceedings under this bill. - Evening Post.

The Panama Railroad.

There is a fair prospect that this longdesired work will, within a few month, be completed, and a transit from ocean to ocean be effected in about two hours with ease and comfort. The New York Tribune learns from the report of the engineers, a copy of which has been furnished to it, that the entire length of this road from Aspinwall, the Atlantic terminus, to Panama, on the Pacific, is 49 miles. Of this distance, 23 miles are now in operation, and in January next the cars will run 31 miles-leaving a section of 18 miles to be constructed. This section is on the back-bone of the Continent, or the summit ridge, of which the maximum grade on the Atlantic slope is \$1 feet to the mile. and on the Pacific slope 70 fees to the mile. The highest elevation of the road is 250 feet above the high tide of the Pacific. It is estimated that 5,000 men can complete the road in six months. The force now at work consists of 1,600 men, in round numbers. Of these about 400 are white men, and the remainder natives, Coolies, and Jamaica men. Arrangements are made to bring 2,500 native workmen from Carthagens and the adjacent country in January, and the Board of Directors have ordered the shipment of 1,700 Coolies from China, and 1,000 hands from

New York Central Railroad Company to the feying pan. Eat them while hot glad to learn that this invention is to be with butter and molasses, or sugar. tried in this country. A patent was taken to England two years ago, but we have neger heard of its adoption there.

Gold and silver are metals quite too heavy for us to carry to heaven; but, in good hands, they can be made to pave the

them Medicines & por

public, which they do with the uthous confidence in its virtuas and womingful cuttainys properties. The following certificates, selected from a large number, are, however, strongertestiment, than his men wards of the proprietors I and are all from gentlement well-known in their localities, and, of the highest repetitability, many of them rending fa the city of Richmond, Va.

T. Howness, Ray, of the Exchange Hotel, Richmond, known every where, says he lags seen the Medicine-called Carter's Synains Mixture alministered, in over a hondred cases, in meanly all the diseases for which it is recommended, with the most actoralizingly good results. He ways it is the most extraordinary meal, which he has extraordinary meal, which he has extraordinary

results. He says it is the most extraordinary measures to be has ever seen.

As one any Ferral Corner flow, —I hereby certify, that for three years I had Appe and Fever of the most violent description. I had several Physicians, took large quantities of Quinlar, Mczeury, and I believe all the Tonics advention, not all without any permanent relief. At less I tried Carter's Spanish Mixture, two bottles of which effectually cured me, and I amhappy to say I have had neither Chills or Fever since. I consider if the best Tonic in the worth, and the only medicine that ever reached my gas.

Beaver Dam, near Richmond, Va.

C. H. Lein, Paq., now in the city of Richmond, and for many years in the Post Office, has not postfideries in the actorishing efficacy of Carter's Mpanish Mixture, that he has hought upwards of 20 bottles, which he has given away to the afficied. Mr. Lock ways he has never known it to fall when taken according to directions.

directions, a practicing Physician, and formerly of the City Hoiel, in the city of Richmond, says he has witnessed in a number of instances the effects of Carnet's Spanish Mixture which were most truly sur-prising. He says in a case of Consumption, depend-ent on the liver, the good effects were wonderful in-dred.

and on the Liver, the good effects were wonderfullinged.

Saguet M. Deinerr, of the firm of Drinker & Morrie, Hichmond, was cured of Liver Complaint of 8 years standing, by the use of two battles of Caster's Spanish Mixture.

Grant Cenna are Schentla.—The Editors of the Michmond Republican had a servant employed in their press from gurrend violets Recording combined with Rheematism, which entirely disabled him from work. Two Buttles of Caster's Spanish Righter made a perfect cure of him, and the Editors, in a piblic notice, as they "therefully recommend the all giver made a perfect cure of him, and the Editors, in a piblic notice, as they "therefully recommend the all giver made a perfect cure of him, and the Editors, in a piblic notice, as they "the buttle of Caster Health who are afflicted with any disease of the blood,"

State Assyrtant Caster Schoolent...—I head a very valuable boy carred of Schoolen by Carter's Spanish Mixture. I consider it truly a valuable medicine, James M. Taylor, Conductor on the R. P. & P. H. R. Co., Hickmond, Va.

Saltz RHEUM OF 20 VEARS STANDING CURED, Mr. John Toonsens, residing in the city of Richmond, was curred by those bottles of Carrer's Spanish Mixture, of Salt Rheum, which he had therry 20 years and which all the phasicians of the city could not care. Mr. Thompson is a well a nown merchant in the city of Richmond, Va., and his core is most as markable.

incents of received a server in the control of the control of Symbile, in the worst form, by Carter's Spanish Mixture. He says he objectfully decommend it, and considers it an invaluable nedicine. Historian E. Wasse, of Mixturend, was citted of Secrobia, and what Physicians called confirming formany too, by three bottles of Carter's Spanish Mixture. Ensure Branch, Commissioner of the revenue, says he has seen the good Carter of Carter's Spanish Mixture. perfect our for that horrise discrete and tays to be greated or Old sore and Ulcars, which dischaled him from malking. Took a few bottles of Carter's Spanish Mixture, and was enabled to walk without a crytch, in a short time permanently cured.

permanently cured.
